

Managed Vulnerability Management

Managed Vulnerability Management from
Flat Earth include the following:

- **Vulnerability Scanning**

Regular vulnerability scans of your IT environment, including servers, applications, and network devices, to identify vulnerabilities.

- **Vulnerability Assessment**

Assessment of the severity for identified vulnerabilities and prioritize them based on the level of risk they pose to your organization.

- **Patch Management for Managed Systems**

Provide guidance on patching vulnerabilities and assist in the implementation of patches to ensure that all known vulnerabilities are remediated.

- **Reporting and Analysis**

Provide regular reports that summarize the results of vulnerability scans, identify trends in vulnerability risks, and provide recommendations for remediation.

- **Remediation Assistance**

Assist your organization with the remediation of identified vulnerabilities, including providing guidance on best practices for remediation and helping to implement remediation actions.

- **Compliance Support**

Assist your organization with relevant industry compliance regulations and standards, such as PCI DSS, HIPAA, and GDPR, by identifying vulnerabilities that may affect compliance and helping to remediate those vulnerabilities.

- **Continuous Monitoring**

Provide ongoing monitoring of your IT environment to detect new vulnerabilities as they emerge and provide guidance on remediation.
