

Managed Firewall Services

Managed Firewall Services from
Flat Earth include the following:

- **Configuration**

Configuration of the firewall policy to meet the organization's specific security needs, including any licensed Next Generation Firewall features.

- Application Awareness
- User Identity Awareness
- Deep Packet Inspection
- Intrusion Prevention System
- Virtual Private Network
- Advanced Threat Protection
- Threat Intelligence

- **Monitoring**

Monitor the health of the firewall for potential issues, such as excessive CPU, network, or file systems utilization.

- **Updates and Patches**

Ensure the firewall is updated with the latest major releases, hotfixes, and security patches.

- **Security Policy Assessments**

Perform regular security best practice assessments to identify potential inadequacies, vulnerabilities, and threats.

- **Break / Fix Support**

Assist the organization in responding to configuration issues or system outages.

- **Disaster Recovery**

Assist with maintaining configuration back-up for use during an RMA replacement for a failed firewall cluster member.

- **Reporting**

Provide regular reports on the performance of the firewall, as well as provide analysis and recommendations for improving security.
