Managed
Endpoint Detection and Response Services

Managed Endpoint Detection and Response Services from **Flat Earth include the following:**

- ## Real-time Monitoring
  Continuously monitor endpoints for signs of suspicious activity, such as unusual network traffic, file changes, and user behavior.

- ## Threat Detection
  Detect known and unknown threats, including malware, ransomware, and zero-day exploits.

- ## Incident Response
  Quarantining infected endpoints, blocking malicious network traffic, and rolling back changes made by malware (when licensed).

- ## Forensics and Investigation
  Provide detailed forensic data and analysis to help investigate and remediate security incidents.

- ## Integration with other security tools
  Integrate with other security tools, such as SIEM solutions, threat intelligence feeds, and firewalls, to provide a comprehensive security posture for an organization.

- ## Centralized Management
  Configure centralized management capabilities, allowing monitoring and management of endpoints from a single console.
